Push Notifications on iOS

CONTENTS

Creating firebase project

Configuring Xcode

Downloading APN key file

Uploading APN key file to firebase

This guide provides a step-by-step guide for enabling push notifications on iOS.

Once configuration provided here is completed, BeDrive will notify users of some events automatically (for example, workspace invitations), but you can also send custom notifications from Firebase site, Enagage -> Cloud Messaging section.

Creating firebase project
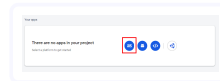

project already, register here and create a new project.

2. With project created, open project settings page:
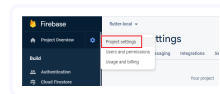

3. Under **Your Apps** click **Add app** and select iOS platform:

4. Enter **Bundle Identifier** from Xcode into **iOS bundle ID** field (other fields can be left empty) and click **Register app.**

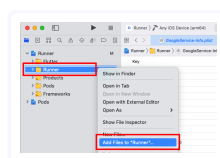

5. Click **Download GoogleService-Info.plist** button to download

5. Other steps can
be skipped on
firebase app
creation wizard.
Click **Next** a few
times and then
**Continue to
console** buttons
to finish app
registration.

Configuring Xcode

1. Open Xcode,
   right click on the
   second **Runner**
   folder and click
   **Add files to
   "Runner"...**

2. Select
   **GoogleService-
   Info.plist** file
   you've
   downloaded
   earlier, and click
   **Add** button.
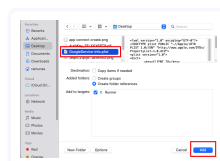

3. Open Signing &
   Capabilities

double click **Push Notifications**.

Downloading APN key file

1. Open your [account page](#) on apple developer site.

2. Select [Certificates, Identifiers & Profiles](#).

3. Select **Keys** in the left menu and click **+** button to create a new key.

4. Enter key name (can be anything), select **Apple Push Notifications service (APNs)**, click **Continue** and then **Register**.

5. Click **Download** button to download the key file. Make sure to keep this file safe as it can't be re-downloaded.

Uploading APN key file to firebase

1. Open your firebase project settings page and select Cloud Messaging.

2. Under **APN Authentication Key**, click `Upload` button, then click `Browse` and select key file you've downloaded earlier.

3. in **Key ID** field enter the back

4. For **Team ID**
   field, hover over
   ? button, click
   on the link in
   popup that
   opens up and
   you should be
   able to see it in
   the new browser
   tab that opens
   up.

5. Copy/Paste the
   Team ID and
   click `Upload`
   button (might
   need to click
   upload button a
   few times).
